

# Effects of Religious Practice on Crime Rates

Metropolitan areas with high rates of congregational membership and areas with high levels of religious homogeneity tend to have lower homicide and suicide rates than other metropolitan areas.<sup>1)</sup> States with more religious populations tend to have fewer homicides and fewer suicides.<sup>2)</sup> Religious attendance is associated with direct decreases in both minor and major forms of crime and deviance, to an extent unrivalled by government welfare programs.<sup>3)</sup> There is a 57 percent decrease in likelihood to deal drugs and a 39 percent decrease in likelihood to commit a crime among the young, black inner city population if they attend religious services regularly.<sup>4)</sup>

In a major national survey of adolescents, a 6 percent reduction in delinquency was associated with a one-point increase on an index that combined adolescents' frequency of religious attendance with their rating of religion's importance.<sup>5)</sup> Each unit increase in a mother's religious practice is associated with a 9 percent decline in her child's delinquency. The adolescents at lowest risk for delinquency typically have highly religious mothers and are themselves highly religious.<sup>6)</sup>

## 1.1 Related American Demographics

Children who attend religious services at least weekly are more likely to have positive social development than those who never attend religious services.<sup>7)</sup> According to the Adolescent Health Survey (Wave I), adolescents who worship at least weekly are less likely to be repeat shoplifters than those who worship less frequently.<sup>8)</sup> (See [Chart](#))

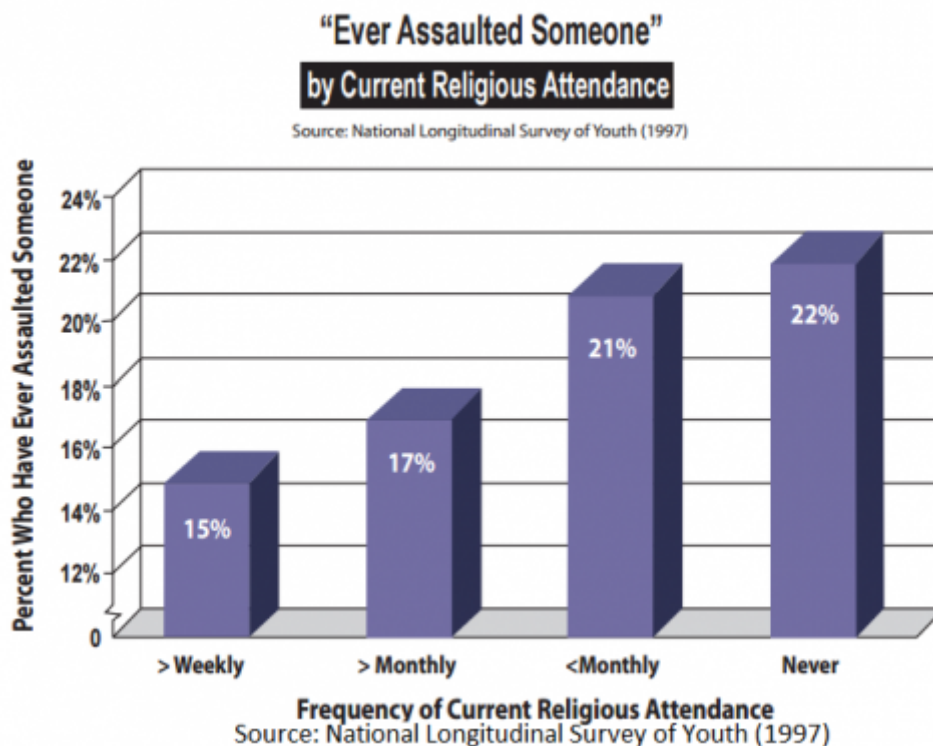

Source: Adolescent Health Survey, Wave I. Adolescents grade 7-12.

Similarly, adolescents who worship at least weekly are less likely to steal than those who worship less frequently.<sup>9)</sup> (See [Chart](#)).

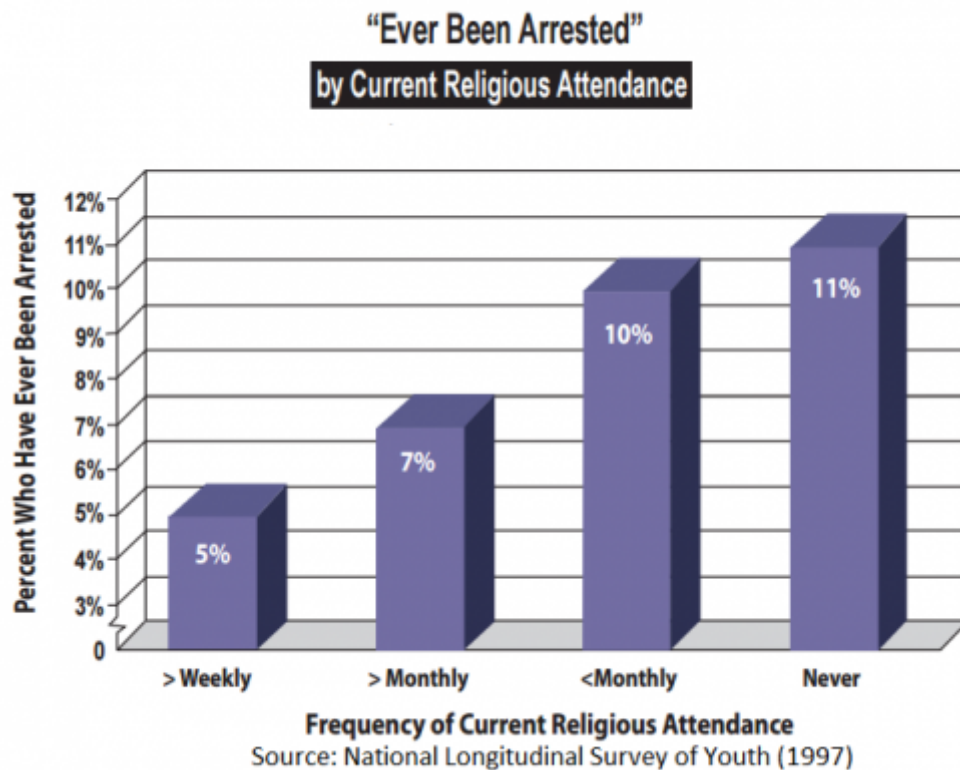

Source: Adolescent Health Survey, Wave I. Adolescents grade 7-12.

The 1997 National Longitudinal Survey of Youth showed that 15 percent of those who attended religious services at least once per week committed assault, compared to 17 percent of those who attended more than once a month, 21 percent of those who attended less than monthly, and 22 percent of those who never attended.<sup>10</sup> (See [Chart](#) Below)

Correspondingly, those who frequently attend religious services are less likely to be arrested.

According to the National Longitudinal Survey of Youth, only 5 percent of youths who currently attend weekly religious services have ever been arrested, followed by those who attend one to three times a month (7 percent), those who attend less than once a month (10 percent), and those who never attend church (11 percent).<sup>11)</sup> (See [Chart](#) Below)
